How to?

- Good search results
- Great Experience

Good Search
Results

The Server

Server name *

MySQL Search Service

Machine name: db

Enter the displayed name for the server.

🟢 Enabled

Only enabled servers can index items or execute searches.

Backend *

🔘 Database

Indexes items in the database. Supports several advanced features, but should not be used for large sites.

Choose a backend to use for this server.

⌃ **Configure *Database* backend**

Database

default > default

Minimum word length

3 ⌄

The minimum number of characters a word must consist of to be indexed

Partial matching

⚪ Match whole words only

🔵 Match on parts of a word

⚪ Match words starting with given keywords

⌄ **Autocomplete settings**

DB Backend

- Easy for ops (hosting)
- Probably sufficient functionality
- A lot of stress on one machine (container)
- More work in PHP

SOLR Backend

- More software to maintain

- Easier to scale

- AI / ML

- Geospatial based search

The index

Edit search index *Umami Search Index* ☆

⚠ This form will not be saved because the configuration active store is read-only.

Index name *

| Umami Search Index |

Machine name: umami_search_index

Enter the displayed name for the index.

Data sources *

☐ Comment

    Provides *Comment* entities for indexing and searching.

☑ Content

    Provides *Content* entities for indexing and searching.

☐ Custom block

    Provides *Custom block* entities for indexing and searching.

☐ Custom menu link

    Provides *Custom menu link* entities for indexing and searching.

☐ File

    Provides *File* entities for indexing and searching.

☐ Search task

    Provides *Search task* entities for indexing and searching.

☐ Shortcut link

    Provides *Shortcut link* entities for indexing and searching.

Enter a description for the index.

⌃ Index options

◯ **Read only**

Do not write to this index or track the status of items in this index.

🟢 **Index items immediately**

Immediately index new or updated items instead of waiting for the next cron run. This might have serious performance drawbacks and is generally not advised for larger sites.

🟢 **Track changes in referenced entities**

Automatically queue items for re-indexing if one of the field values indexed from entities they reference is changed. (For instance, when indexing the name of a taxonomy term in a Content index, this would lead to re-indexing when the term's name changes.) Enabling this setting can lead to performance problems on large sites when saving some types of entities (an often-used taxonomy term in our example). However, when the setting is disabled, fields from referenced entities can go stale in the search index and other steps should be taken to prevent this.

Cron batch size

```
50
```

Set how many items will be indexed at once when indexing items during a cron run. "0" means that no items will be indexed by cron for this index, "-1" means that cron should index all items at once.

Save   🗑 **Delete**

Manage fields for search index *Umami Search Index* ☆

ENABLED

☐ Content access
   Adds content access checks for nodes and comments.

☐ Entity status
   Exclude inactive users and unpublished entities (which have a "Published" state) from being indexed.

☑ Highlight
   Adds a highlighted excerpt to results and highlights returned fields.

☑ HTML filter
   Strips HTML tags from fulltext fields and decodes HTML entities. Use this processor when indexing HTML data – for example, node bodies for certain text formats. The processor also allows to boost (or ignore) the contents of specific elements.

☑ Ignore case
   Makes searches case-insensitive on selected fields.

☐ Ignore characters
   Configure types of characters which should be ignored for searches.

☐ Index hierarchy
   Allows the indexing of values along with all their ancestors for hierarchical fields (like taxonomy term references)

☑ Stemmer
   Stems search terms (for example, *talking* to *talk*). Currently, this only acts on English language content. It uses the Porter 2 stemmer algorithm (More information). For best results, use after tokenizing.

☑ Stopwords
   Allows you to define stopwords which will be ignored in searches. **Caution:** Only use after both 'Ignore case' and 'Tokenizer' have run.

☑ Tokenizer
   Splits text into individual words for searching.

☑ Transliteration
   Makes searches insensitive to accents and other non-ASCII characters.

☑ Type-specific boosting
   Adds a boost to indexed items based on their datasource and/or bundle.

Overview

The Facet module allows site builders to easily create and manage faceted search interfaces. In addition to the UI components that come out of the box, themers and module developers can build their own widgets that can optionally be contributed back to Drupal.org. Facets work with Drupal Core Search and Search API, meaning that code and configuration can be reused as-is with the most popular search solutions available to Drupal.

Facets is a Drupal 9 and above only solution. Please see Facet API for a Drupal 7 solution.

We showcase the ecosystem of Search API, including facets, sorting, autocomplete and more at http://drupalsear.ch. It is possible to login and check out the configuration of the site to see some of the best practice configurations. The code for this demo site is available at https://github.com/nickveenhof/drupal8-umami-search.

∨ How much is a trip to space?

∧ Is Virgin galactic a good investment?

Virgin Galactic is an extremely risky offering that's not for the faint of heart — and when it comes to a potentially game-changing opportunity like this, investors are always going to have to pay a premium, even without a concrete roadmap to future profitability.

∨ What is the purpose of SpaceX?

Facets View Mode

View　Version control　View history　Automated testing

Created by **asghar** on *2 September 2018*, updated *17 September 2021*

This project is not covered by Drupal's **security advisory policy**.

Facets module does not provide out-of-the-box render facet with view mode. If you want to render facet item like taxonomy term, the node with view mode you can use this module. Here are steps to configure the module
1- Enable this module.
2- Go to facet list page admin/config/search/facets.
3- Edit your facet admin/config/search/facets//edit
4- You will see "Facet view mode" in *FACET SETTINGS* section.
5- Click the checkbox and you will see display mode select box.
